Ocean Pollution: Effects on Living Resources and Humans (CRC Marine Science)

Carl J. Sindermann

Ocean Pollution: Effects on Living Resources and Humans (CRC Marine Science) Carl J. Sindermann Ocean Pollution provides a unique look at the effects of estuarine and coastal pollution on resource species. One of the primary objectives of the book is to provide an accurate assessment of the state of the inshore marine environment and its inhabitants. Coastal habitat degradation is discussed, and principal findings from modeling and other research efforts are analyzed and evaluated. The research undertaken thus far extends beyond the effects of pollution on resource population size to disease effects in fish and humans, effects on aquaculture, and effects on productive systems of the oceans. These far-reaching consequences - and potential consequences - of ocean pollution are expertly presented, and suggestions for mitigation are made. Realistic scenarios about the future effects of ocean pollution are outlined, providing a powerful tool for researchers and regulators.
